Spreading Smart Systems innovation across Europe

A two-year project to achieve successful integration of Smart Systems in a broader spectrum of products and applications.

Objectives

Secure the position of Smart Systems Integration as key enabler for innovation.

Support the Smart Systems industry and community in Europe, through EPoSS.

Open new market opportunities for Smart Systems Integration by responding to demand side needs.

Project data

1.5 million euros to unveil and promote **new functionalities** and **advantages** enabled by the integration of Smart Systems in existing products and processes.

18 partners from Smart System Integration related clusters, research institutes and industries.
